

QHMP L SMART POWER BANK

A high-capacity power bank that can power-up two devices simultaneously
— Ashok Pandey

Smart Power Bank comes with a 7800mAh lithium ion battery and has two USB ports that allow you to connect two devices simultaneously. Both ports have 5V/1A-2A output capacity. It comes with a special RISC microprocessor (Reduced Instruction Set Computer) that increases its charging speed and enhances the battery life. The RISC microprocessor enables seamless integration into a range of different smartphones and gadgets. It auto-adjusts charging voltage and current needs patterned to different mobile phones. The power bank comes in a classic mosaic white color and has one white LED light that can be used as a pocket torch when required.

In our testing, it was able to fully charge two devices simultaneously, one with 3100 mAh battery and another with 200 mAh battery.

Bottom line: The smart power bank has a high capacity battery, LED torch and two charging ports, which makes it suitable for people looking for a power-packed option for their devices.
